Digital Literacy Project Report

Name: Sunil Matwa

Registration Number: 25BCE10466
Course Code: CSE0001
Branch: B.Tech
University: VIT Bhopal
Date: 2026

Introduction

Digital literacy is an essential skill in today's modern world. It helps individuals use digital tools effectively, communicate professionally, and stay safe online. As a Student Digital Ambassador, my role is to guide peers in understanding digital platforms and responsible usage. This project focuses on developing awareness about digital tools, building a professional online presence, and understanding cyber safety. Through various tasks like creating an infographic, building a portfolio, exploring platforms, writing professional emails, and studying cybercrime, I gained practical knowledge. This project not only enhanced my technical skills but also improved my communication and awareness about safe digital practices.

Task 1 – Infographic

For this task, I created a digital literacy infographic using Canva. The infographic explains the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I included key points such as using strong passwords, avoiding suspicious links, and using platforms like GitHub and LinkedIn for career growth.

The design was made visually appealing using icons, colors, and simple text to ensure easy understanding. Canva made it easy to drag and drop elements and create a clean layout.

One challenge I faced was selecting the right design elements without overcrowding the infographic. However, I learned how to balance content and design effectively. This task helped me understand how to present information visually, which is an important skill in digital communication.

🟩 Task 2 – Digital Portfolio

In this task, I created profiles on GitHub, LinkedIn, and Kaggle. GitHub is used to showcase coding projects, LinkedIn is used for professional networking, and Kaggle is useful for data science learning.

On GitHub, I created a profile README with my details and learning goals. On LinkedIn, I added my education details and started building a professional profile. These platforms are important for career growth and internship opportunities.

Over the next four years, I plan to upload projects on GitHub, connect with professionals on LinkedIn, and practice skills on Kaggle. This will help me build a strong digital presence and improve my career opportunities.

🟩 Task 3 – Platforms

For coding practice, I used HackerRank and solved a beginner-level problem. It helped me understand basic problem-solving and logic building.

For collaboration, I created a Google Form with five questions related to digital literacy awareness. The form included multiple-choice and short-answer questions. I also viewed responses using Google Sheets.

These tools are very helpful for academic learning. HackerRank improves coding skills, while Google Forms helps in collecting and analyzing data. This task improved my understanding of online platforms used in education and collaboration.

Task 4 – Communication

In this task, I learned the importance of professional communication. I wrote two formal emails — one requesting assignment extension and another applying for an internship.

Poor digital communication can create misunderstandings. For example, sending emails without proper subject lines or greetings may look unprofessional. A well-structured email with a clear message improves communication.

I also created a social media checklist to guide students on responsible usage. This task helped me understand the importance of tone, clarity, and professionalism in digital communication.

🟩 Task 5 – Cybercrime

I studied phishing as a cybercrime. Phishing is a method where attackers trick users into sharing personal information through fake emails or links.

I was surprised to learn how easily people fall into such traps. Even educated users can become victims if they are not careful.

As a result, I will always verify links before clicking and avoid sharing sensitive information online. This task increased my awareness of cyber threats and safe practices.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use digital tools effectively, communicate professionally, and stay safe online. Each task provided practical knowledge that will be useful in my academic and professional life. Building a digital portfolio and understanding cyber safety were especially valuable. Overall, this project improved my confidence in using digital platforms responsibly.
